## SPIRou Quick Installation Guide

version 0.0.56

For DRS SPIRou 0.1.035 (alpha pre-release)

## 0.1 Linux

This is a quick guide to installation, for a more full description please see the full documentation . This assumes you have the latest version of Anaconda for python 3 (or python 2) and are using BASH.

- 1. Get the latest version of the DRS (for SPIRou version 0.1.035 (alpha pre-release)). from here: https://github.com/njcuk9999/spirou\_py3
- 2. Download the test data from here: http://genesis.astro.umontreal.ca/neil/spirou\_test\_data\_alpha0.1.003.zip (if required).
- 3. Extract the DRS (make a note of the path, hereinafter DRS ROOT)
- 4. Add the following paths to your PATH and PYTHON PATH environmental variables

```
e.g. in ~/.bashrc

export PATH="DRS_ROOT/bin/:{$PATH}"

export PYTHONPATH="DRS_ROOT:DRS_ROOT/bin/:{$PYTHONPATH}"
```

5. make sure your paths are set

```
>> source ~/.bashrc
>> echo $PATH
```

- 6. Make recipes executable (found in the DRS ROOT /bin folder) to use from the command line.
- 7. Setup the DRS paths (edit the file: '../config /config.py'):

```
TDATA
                              = /drs/data/
                                                         Define the DATA directory
                                 /drs/INTROOT/
DRS_ROOT
                                                         Define the installation directory
DRS DATA RAW
                                 /drs/data/raw
                                                         Define the folder with the raw data files in
                                                         Define the directory that the reduced data
DRS_DATA_REDUC
                                 /drs/data/reduced
                                                         should be saved to/read from
DRS_CALIB_DB
                                 /drs/data/calibDB
                                                         Define the directory that the calibration
                                                         files should be saved to/read from
DRS_DATA_MSG
                                 /drs/data/msg
                                                         Define the directory that the log messages
                                                         are stored in
                                                         Define the working directory
DRS DATA WORKING
                              = /drs/data/tmp/
```

- 8. Make sure USER\_CONFIG and DRS\_DEBUG are set to a value of 0 (or False) and that ICDP NAME is set to 'constants' SPIROU.py'.
- 9. validate the DRS installation:

```
>> cal_validate_spirou

Or
>> python cal_validate_spirou
```

The DRS is now installed and set-up. To run see the full documentation .

## 0.2 Mac

This is a quick guide to installation, for a more full description please see the full documentation. This assumes you have the latest version of Anaconda for python 3 (or python 2) and are using BASH.

- 1. Get the latest version of the DRS (for SPIRou version 0.1.035 (alpha pre-release)). from here: https://github.com/njcuk9999/spirou\_py3
- 2. Download the test data from here: http://genesis.astro.umontreal.ca/neil/spirou\_test\_data\_alpha0.1.003.zip (if required).
- 3. Extract the DRS (make a note of the path, hereinafter DRS\_ROOT)
- 4. Add the following paths to your PATH and PYTHON PATH environmental variables

```
e.g. in ~/.bashrc or ~/.bash_profile

export PATH=".:DRS_ROOT/bin/:{$PATH}"

export PYTHONPATH=".:DRS_ROOT:DRS_ROOT/bin/:{$PYTHONPATH}"
```

5. make sure your paths are set

```
>> source ~/.bashrc
>> echo $PATH
```

- 6. Make recipes executable (found in the DRS ROOT/bin folder) to use from the command line.
- 7. Setup the DRS paths (edit the file: '../config /config.py '):

```
TDATA
                                 /drs/data/
                                                         Define the DATA directory
DRS_ROOT
                                 /drs/INTROOT/
                                                         Define the installation directory
DRS_DATA_RAW
                                 /drs/data/raw
                                                         Define the folder with the raw data files in
DRS_DATA_REDUC
                                 /drs/data/reduced
                                                         Define the directory that the reduced data
                                                         should be saved to/read from
DRS CALIB DB
                                 /drs/data/calibDB
                                                         Define the directory that the calibration
                                                         files should be saved to/read from
DRS_DATA_MSG
                                  /drs/data/msg
                                                         Define the directory that the log messages
                                                         are stored in
DRS_DATA_WORKING
                                 /drs/data/tmp/
                                                         Define the working directory
```

- 8. Make sure USER\_CONFIG and DRS\_DEBUG are set to a value of 0 (or False) and that ICDP NAME is set to 'constants SPIROU.py'.
- 9. validate the DRS installation:

```
>> cal_validate_spirou*.py)

Or

>> python cal_validate_spirou
```

The DRS is now installed and set-up. To run see the full documentation .

## 0.3 Windows

This is a quick guide to installation, for a more full description please see the full documentation. This assumes you have the latest version of Anaconda for python 3 (or python 2)

- 1. Get the latest version of the DRS (for SPIRou version 0.1.035 (alpha pre-release)). from here: https://github.com/njcuk9999/spirou\_py3
- 2. Download the test data from here: http://genesis.astro.umontreal.ca/neil/spirou\_test\_data\_alpha0.1.003.zip (if required).
- 3. Extract the DRS (make a note of the path, hereinafter DRS\_ROOT)
- 4. Add the following paths to your PATH environmental variable

```
In "Environmental Variables"

DRS_ROOT\bin\;
```

5. Add the following paths to your PYTHONPATH environmental variable

```
In "Environmental Variables"

%PYTHONPATH%;DRS_ROOT;DRS_ROOT\bin\;
```

6. Setup the DRS paths (edit the file: '../config /config.py'):

```
TDATA
                       = C:\\Users\\User\
                                                           Define the DATA directory
                          \Documents\\drs\\data
DRS_ROOT
                                                           Define the installation directory
                       = C:\\Users\\User\
                          \Documents\\drs\\INTROOT
DRS\_DATA\_RAW
                                                            Define the folder with the raw data files
                          C:\\Users\\User\
                          \Documents\\drs\\data\\raw
DRS DATA REDUC
                       = C:\\Users\\User\
                                                            Define the directory that the reduced
                          \Documents\\drs\\data\
                                                            data should be saved to/read from
                           \reduced
DRS_CALIB_DB
                          C:\\Users\\User\
                                                           Define the directory that the calibra-
                          \Documents\\drs\\data\
                                                            tion files should be saved to/read from
                          \calibDB
DRS\_DATA\_MSG
                                                            Define the directory that the log mes-
                          C:\\Users\\User\
                          \Documents\\drs\\data\\msg
                                                            sages are stored in
DRS DATA WORKING=
                          C:\\Users\\User\
                                                            Define the working directory
                          \Documents\\drs\\data\\tmp
```

**Note:** Note paths in windows must have a '\\' also the python files must be open with a valid editor such as Sublime Text, Notepad++, Spyder or Pycharm for example

- 7. Make sure USER\_CONFIG and DRS\_DEBUG are set to a value of 0 (or False) and that ICDP NAME is set to 'constants SPIROU.py'.
- 8. validate the DRS installation:

```
>> python cal_validate_spirou
```

The DRS is now installed and set-up. To run see the full documentation .
